

**Fund Objective**

The portfolio aims to provide investors with a higher level of income than a pure income fund, while minimising risk and ensuring capital stability. The investment manager will actively manage the investment opportunities to achieve the best rates of income from income generating instruments within the investment universe, to achieve the funds objective.

**Fund Universe**

To achieve this objective, the securities normally to be included in the portfolio will comprise a combination of global bonds, interest bearing securities, including loan stock, preference shares, equity securities, listed property securities, semi-gilts, debentures, debenture bonds and notes, money market instruments, and other non-equity securities, in line with the objective of the portfolio and assets in liquid form. Interest bearing instruments in a currency other than the Republic of South Africa, may only be included in this portfolio, if they comply with a credit rating of investment grade by the credit rating agencies approved by the Registrar, or if they comply with other regulations published by the Registrar, provided further that if the grading of an instrument differs between the rating agencies, the lower grading will apply.

**Manager Commentary**

On the home front economic and markets were positive. The SARB MPC reduced the repo rate by 25bp at the end of May whilst the MPC's tone was dovish in nature. Five members opting for a 25bp cut and one member preferred a 50bp reduction. The MPC decided to cut because risks to inflation pressures had subsided, as reflected by lower oil prices, diminished domestic and global uncertainties, and the USD/ZAR ended the month at 18.00, which represented a 3.28% appreciation for the month.

A welcome de-escalation between the US and China tariff war took place during May. Both nations agreed to significantly reduce tariffs that they had levied on each other for a period of 90 days. This led to a market rally as this development would help prospects of easing inflation pressures and global growth from potentially slowing. Local equities, in line with across both advanced and emerging markets, had positive gains.

Investors are reassessing duration exposure, with long-dated bonds offering compelling yields relative to risk assets. For the first time since the 1970s, foreign investors are steering away from what were previously the global safe haven assets - the U.S. dollar and U.S. Treasury bonds. Local bonds outperformed with the ALBI returning 2.7% as yields fell by double-digit basis points across the curve, unlike the US where the yield on the benchmark 10-year bond increased by 24.0bp to 4.40%. Moody's Ratings has downgraded the US' ratings to Aa1 with a stable outlook, reflecting a lasting deterioration in fiscal strength.

Whereas easing inflationary pressures, potential rate cuts, and stronger fiscal discipline across markets are creating a more attractive environment for government debt diverging policies between the Central banks are shaping opportunities across different regions. The Fund maintains its focus on active management and diversification.

**Fund Information**

Portfolio Manager:	Helen Masson
Inception Date of Fund:	01-Mar-2018
Inception Date of Class:	01-Mar-2018
Benchmark:	3 Months JIBAR
Classification:	South African – Multi Asset – Income

## Growth of a R 100 000 Invested since Inception

Volatility is a statistical measure of the dispersion of returns for a given security or market index.

Tracking error is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager; it indicates how closely a portfolio follows the index to which it is benchmarked.

Information ratio, is a measure of the risk-adjusted return of a portfolio. In this case, it measures the active return of the manager's portfolio divided by the amount of risk that the manager takes relative to the benchmark.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk. The greater a portfolio's Sharpe ratio, the better its risk-adjusted performance has been (i.e. a higher return with a contained risk profile, where the portfolio manager is not taking excessive risk to achieve those returns).

Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Alpha is a measure of the active return on an investment. It represents the excess returns of a fund relative to the return of a suitable benchmark.

## Disclaimer and Disclosures

Collective Investment Schemes are generally medium to long term investments. The value of participatory interests or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available on request from the manager. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The Manager retains full legal responsibility for the fund, regardless of Co-Naming arrangements. Transaction cut off time is 14:30 daily. Each portfolio may be closed for new investments. Valuation time is 15:00 (17h00 at quarter end). Prices are published daily and available newspapers countrywide, as well as on request from the Manager. IP Management Company (RF) Pty Ltd is the authorised Manager of the Scheme – contact 021 673 1340 or [ipmc\\_clientservices@fundrock.com](mailto:ipmc_clientservices@fundrock.com). Standard Bank is the trustee / custodian – contact [compliance-IP@standardbank.co.za](mailto:compliance-IP@standardbank.co.za). Additional information including application forms, the annual report of the Manager and detailed holdings of the portfolio as at the last quarter end are available, free of charge, from [ipmc\\_clientservices@fundrock.com](mailto:ipmc_clientservices@fundrock.com). A statement of changes in the composition of the portfolio during the reporting period is available on request. The performance is calculated for the portfolio. The individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax.

The portfolio may include foreign investments and the following additional risks may apply: liquidity constraints when selling foreign investments and risk of non-settlement of trades; macroeconomic and political risks associated with the country in which the investment is made; risk of loss on foreign exchange transactions and investment valuation due to fluctuating exchange rates; risk of foreign tax being applicable; potential limitations on availability of market information which could affect the valuation and liquidity of an investment. All of these risks could affect the valuation of an investment in the fund.

The total expense ratio (TER) was incurred as expenses relating to the administration of the financial product. Transaction costs (TC) relate to the buying and selling of the assets underlying the financial product. Total Investment Charge (TIC) is the value of the financial product incurred as costs relating to the investment of the financial product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts the financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time such as market returns, the type of financial product, the investment decisions of the investment manager and the TER.

Annualised returns is the weighted average compound growth rate over the performance period measured. Fund returns shown are based on NAV-NAV unit pricings calculated from INET / IRESS for a lump-sum returns is the weighted average compound growth rate over the performance period measured. Fund returns shown are based on NAV-NAV unit pricings calculated from INET / IRESS for a lump-sum investment with income distribution reinvested (after fees and cost). Performance numbers and graphs are sourced from Global Investment Reporting (Pty) Ltd.

### The Effective Annual Cost (EAC)

The EAC is a standard industry measure which has been introduced to allow you to compare the charges you incur and their impact on the investment returns over specific periods. You can contact [ipmc\\_clientservices@fundrock.com](mailto:ipmc_clientservices@fundrock.com) or call us on (021) 673-1340 for an Effective Annual Cost disclosure statement. Please visit <http://www.ipmc.co.za/effective-annual-cost> to address the EAC illustrator. Please note any complaints can be directed to [ipmc\\_complaints@fundrock.com](mailto:ipmc_complaints@fundrock.com).
