RISK PROFILE

Medium - High Risk

•This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be higher than a medium risk portfolio.

•Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks

•The portfolio is exposed to equity as well as default and interest rate risks.

•Therefore, it is suitable for medium to long term investment horizons
