Investment objective

The Momentum Institutional Enhanced Yield Fund is an actively managed portfolio of domestic fixed and floating interest rate instruments, which aims to provide a competitive money market return without compromising on liquidity or exposing capital to undue risk. The portfolio is suited to investors with a low risk profile seeking returns superior to those of pure cash holdings, but with a commensurate risk profile. The portfolio aims to outperform the benchmark by 0.75% over a rolling one-year period (gross of fees).

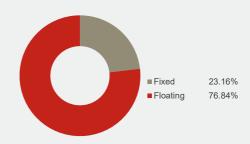

Investment strategy

The fund retains many of the characteristics of a typical money market fund, but a more flexible mandate increases the universe of investable securities. The ability to capture term premium in longer dated instruments allows for the potential for enhanced returns whilst a modified duration limit of 180 days on average is applied to the fund. The process aims to maximise risk-adjusted returns relative to benchmark by extracting value from as many sources as possible in the money market and short-dated capital market as well as through the use of credit. This should ensure consistent outperformance of the benchmark under varying market conditions, by diversifying risks across the portfolio and reducing the correlation between the instruments. The sources of value will depend on the asset manager's view on interest rates, credit and liquidity risk. The portfolio reflects the Fixed Income Team's best investment view, which takes advantage of opportunities in each of the above areas, thus maximising the potential for adding value.
