

Peregrine Capital High Growth H4 Retail Hedge Fund

MINIMUM DISCLOSURE DOCUMENT
30 June 2025

Fund objective

The goal of the High Growth Fund is to create long-term wealth for investors by investing in our best investment ideas. The fund aims to deliver industry leading long-term investment growth for our investors, while assuming moderate levels of risk.

What does the fund invest in?

The fund can invest in a wide range of assets, such as listed shares, bonds and property, as well as cash and cash equivalents, both in South Africa and internationally.

Important fund characteristics and risks

The fund managers look for undervalued securities that offer strong upside potential over the medium to longer term. We conduct rigorous research to understand the companies we invest in and determine their intrinsic value, which allows us to identify the opportunities with the best expected returns. In addition to investing in equities, the fund can also invest in a variety of other assets, such as listed property and bonds. By actively managing the fund's exposure to these different asset classes, we seek to enhance long-term returns while managing the overall level of risk. The fund may experience negative returns in periods of negative market returns, albeit at a lower level than a fund that is only invested in shares. It is unlikely that the fund will lose money over the medium to longer term.

Who should consider investing in the fund?

The High Growth Fund is suitable for you if:

- You are looking for exceptional long-term capital growth
- You are comfortable to assume a moderate to high level of market risk
- You are ideally investing for at least five years

Net Returns	High Growth Fund	SA Multi Asset-High Equity Category	FTSE/JSE Capped SWIX All Share Index

IMPORTANT NOTES ON CALCULATION OF NET RETURNS AND RISK MEASURES:

The High Growth Fund does not have a benchmark and does not contribute towards the return of the ASISA SA Multi Asset - High Equity Category. The data for the ASISA SA Multi Asset - High Equity Category and the FTSE/JSE Capped SWIX All Share Index is provided for comparative purposes.

FUND COMMENTARY

Quarterly Performance

The Peregrine Capital High Growth Retail Fund delivered a net return of 5.4% for the second quarter of 2025. This compares with the SA Multi Asset- High Equity Index , which gained 6.3%.

Attribution

Companies in the technology, semiconductor and insurance sectors drove the majority of the positive fund performance, while exposure to ecommerce and healthcare companies, and government bonds, detracted from performance in the quarter. Put option exposure also added meaningfully to fund performance in the period.

Macro

The local equity market performed strongly during the quarter, with the JSE Capped SWIX delivering a total return of 9.7%. This was mainly driven by a continued rally of 13% by companies in the resources sector. Local bonds also rallied this quarter as concerns about the longevity of the GNU waned and a sense of calm reemerged. Neither the ANC, nor the DA, wants to be seen as the party responsible for the collapse of the GNU, so the awkward embrace of the erstwhile rivals continues to hold steady. Sadly, the hope of any meaningful and urgent structural reforms remains elusive, given ideological differences and lack of trust between the major parties in government.

Internationally, equity markets were shocked by the announcement of a worldwide tariff regime by President Trump on the 2nd of April 2025. The concern was that the imposition of these additional taxes would serve as a major barrier to trade, reignite inflation and cause a painful global recession. As the weeks passed, it became clear that the tariff threat was used mainly as a bargaining tool to gain leverage in political and economic discussions with other countries to better serve US interests. While US tariffs are higher across the board, the impact has been far less severe than what was initially anticipated. Focus has now shifted to the US fiscal deficit and the unsustainable debt burden, which seems like an intractable problem that neither political party in the US has the will to resolve. In the absence of higher taxes or higher GDP growth, it seems likely that the government will simply opt to inflate the issue away.

Portfolio Construction

In the last quarterly update, we mentioned the extensive use of put option insurance to protect the funds from the impact of US tariffs. This "insurance" worked extremely effectively, protecting investor's capital and providing the team with the confidence to increase exposure to companies at attractive valuations. At quarter end, gross exposure had increased from 131% to 132%, while net exposure to equities and real estate had increased from 65% to 75%. Exposure to bonds fell from 7% to 5% while cash holdings fell to 20%. Portfolio net exposure increased this quarter as the team was able to identify additional opportunities in both the domestic and offshore equity space, taking advantage of the sell-off. We purchased select US technology names where valuations are now far more compelling and increased exposure to South African retailers, banks and insurers in light of more constructive outlooks and attractive valuations.

Outlook

While geopolitical uncertainties and risks remain heightened, the market appears to have digested these risks. Market levels signal more optimism than fear. We are increasingly confident that advancements in AI technologies will reduce costs and accelerate revenues of companies we are invested in, which is incredibly exciting. We remain focused on identifying stock specific opportunities that offer attractive risk reward prospects, while concurrently prioritising downside protection. Our exposure is now more biased to opportunities in the US and South Africa, rather than Europe and China. Our team remains excited about the opportunities and challenges ahead, and endeavour to continue compounding investor capital at the best possible rate, employing the same tried and tested methods we have used for the past 27 years.

FUND CHARGES (Excl. VAT)

GLOSSARY

Annualised performance: reflects longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period.

High Water Mark (HWM): The highest point in value that the investor's unit has reached. The HWM mark ensures that Peregrine Capital does not get paid a Performance Fee for the same performance twice. The HWM is updated at each Crystallisation Point.

Maximum drawdown: the largest peak to trough decline during a specific period of investment

Total Expense Ratio: includes the annual service charge, performance fee and administrative costs, but excludes VAT and fund transaction costs, expressed as a percentage of the average monthly value of the fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return.

Transaction Costs: are the costs relating to the buying and selling of the fund's underlying assets, expressed as a percentage of the NAV. Transaction costs are a necessary cost in managing the fund and may impact the returns.

Total Investment Charge is the sum of the TER and TC. These should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund and the investment decisions of the fund manager. Since the fund returns are quoted after the deduction of these expenses, the TER and TC should not be deducted again from published returns.

**QUARTERLY RISK REPORTING
for the quarter ended 30 June 2025****Sources of Leverage:**

The prime broker appointed for the fund is Peresec (Pty) Ltd ("Peresec"). The fund achieves its leveraged positions through the utilisation of derivatives and short positions. Refer below for the quarter end leverage value.

Exposure Limits:

Gross exposure is the measure of leverage, with the limit set at 2 times NAV.

Peak gross exposure during reporting period	1.58 Times NAV
Gross exposure at quarter end	1.32 Times NAV

COUNTERPARTY EXPOSURE:

The counterparties to which the fund is exposed to on **30 June 2025** are:

Counterparty	Exposure
Peresec	3.59%
JP Morgan	0.58%
BNY	0.28%
Morgan Stanley	9.54%
Standard Bank of South Africa Limited	0.13%

Re-hypothecation of assets:

Re-hypothecation refers to the practice whereby the prime broker uses the securities of the fund as collateral for the prime broker's own purposes. The prime broker mandate in place with Peresec does not permit the rehypothecation of assets. The mandate in place with Morgan Stanley & Co. International plc allows for rehypothecation in accordance with the agreed terms. On a daily basis the maximum limit of re-hypothecation allowed is calculated, referred to as the adjusted value, and is reported with the details of any re-hypothecated assets. At quarter end there were no re-hypothecated assets.

Methodology of stress testing:

The methodology for stress testing is based on a regulatory requirement to test the impact on the performance of the fund under outlier events based on historical correlations. H4 uses an external risk data service provider, RisCura Analytics (Pty) Ltd, who has the capabilities to stress test portfolio information through a global risk factor model, MSCI BarraOne. Various stressed environments have been created and their impact assessed on the fund.

H4 are comfortable with the results of the stress testing performed on the fund for the quarter.

Changes to the liquidity profile of the fund:

There were no significant changes to the liquidity profile of the fund.

Contact information:

For more information regarding risk reporting, please contact H4 on **hedgerisk@h4ci.co.za** or +27 21 670 5259.

Investment strategy and mandate

The fund invests across asset classes, both locally and offshore. Significant exposures may be taken in individual positions from time to time. Peregrine Capital employs a bottom up stock selection process based on rigorous and disciplined fundamental research, drawing on experience of covering the sectors and companies over many years. Peregrine Capital focuses its time on building up a detailed understanding of specific companies, rather than predicting the economic trends or taking a view on overall markets.

Risk warning

The risks associated with investing in the fund include, but are not limited to, the following: general market risks (such as general movements in interest rates; external factors [war, natural disasters and such like]; changes to the law and regulatory frameworks; governmental policy changes; global, regional or national economic developments and risks related to a specific security (such as the possibility of a company's credit rating being downgraded).

The fund managers may use leverage. Leverage is the use of various financial instruments or borrowed capital, such as margin, to increase the potential return of an investment. Leverage includes the use of derivatives. Derivatives derive their value from the value of an underlying asset. The use of leverage within the fund involves risk because depending on how the leverage is structured, the fund's losses or gains may be unlimited. Other risks include counterparty risk and liquidity risk. The fund may take significant exposures in individual positions which may create concentration risk.

Counterparty risk is the risk that the other party to a transaction may not be able to perform its obligations. Liquidity risk means that during volatile periods, the tradability of certain instruments may be impeded. Where foreign securities are included in the fund there may be potential constraints on liquidity and the repatriation of currency, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks and potential limitations on the availability of market information.

General information

This document is the minimum disclosure document ("MDD") required by Board Notice 92 of 2014 published by the Financial Sector Conduct Authority under the Collective Investment Schemes Control Act, No. 45 of 2002. Collective Investment Schemes in Hedge Funds should be considered as medium to long-term investments. The value may go down as well as up and past performance is not necessarily a guide to future performance. Collective Investment Schemes in Hedge Funds are traded at the ruling price and can engage in scrip lending and borrowing. A schedule of fees, charges and maximum commissions is available on request from the Manager. Neither the Manager nor Peregrine Capital provides any guarantee either with respect to the capital or the investment performance of the fund.

The Manager has the right to close the fund to investments from new investors, and/or to close the fund to new investments, and/or to accept new investments only from certain persons or groups of persons, and/or to limit or suspend the creation and issue of new participatory interests, in each case on such terms as it may determine, if such restrictions will, in the Manager's view, benefit the fund or the effective management thereof or for any other reason whatsoever. Where any forecasts or commentary about the expected future performance of asset classes, or the market in general, are made in this document, please note that neither Peregrine Capital nor H4 guarantee that such forecasts or commentary will occur.

Calculation of the NAV and price

The value of participatory interests (also referred to as units) is calculated on a net asset value ("NAV") basis. The NAV is the total value of all assets in the fund including any income accruals and less any permissible deductions (which may include audit fees, brokerage, service fees, securities transfer tax and bank charges) for a particular class. The price of participatory interests is calculated by dividing the NAV by the number of participatory interests in issue for that class. The price of participatory interests is published monthly in the MDD, which is available at www.peregrine.co.za.

Investment performance

The performance calculated and shown is that of the fund. Performance has been calculated using net NAV to NAV numbers with income reinvested. The investment performance for each period shown reflects the net return for investors who have been fully invested for that period. Individual investor investment performance may differ as a result of initial fees (if applicable), the actual investment date, the date of reinvestment of distributions and/or distribution dates, and dividend withholding tax. Where periods of longer than 1 year are used in calculating past performance, certain figures may be annualised. Annualised performance is the average return per year over the period. Actual annual figures and investment performance calculations are available on request from H4.

Performance fees

A management and performance fee is charged to the fund. Performance fees are payable on positive performance using a participation rate of 20%.

Total Expense Ratio for year ended 31 March 2025: 7.12%

A high water mark ("HWM") is applied, which ensures that performance fees will only be charged on new performance. There is no cap on the Rand amount of performance fees.

Disclosure in respect of third party named portfolios

The fund is a third party named portfolio. A hosted or third party named portfolio bears the name of the Manager and the fund manager. The Manager retains full legal responsibility for hosted/third party named portfolios.

Fund valuation time

Fund valuations take place at approximately 15h00 each day.

Transaction cut-off times

Please refer to the H4 Hedge Fund Portfolios Terms and Conditions, which is available on request from H4.
