Risk profile

Fund facts

Fund objective

To provide capital growth and income that exceeds that of the global equities market over any five-year period, while applying ESG and sustainability criteria. The Fund also seeks to increase the income stream every year, in US dollar terms.

Investor profile

Investors seeking long-term growth from a diversified portfolio of global listed infrastructure equities. The recommended investment horizon is 5 years or longer.

Investment mandate

The Fund is a feeder fund and, other than assets in liquid form and currency contracts, invests only in one underlying fund – the M&G (Lux) Global Listed Infrastructure Fund, domiciled in Luxembourg. The underlying fund aims to invest at least 80% of its assets in listed infrastructure companies, investment trusts and REITs. It invests in securities that meet its ESG criteria, applying an Exclusionary Approach and SDG considerations. It may also invest in other CISs and financial derivative instruments.

Fund commentary

Global equity markets posted strong gains in July, driven by a resurgent US, as the second quarter company earnings season got off to a solid start and a number of trade deals came through. The US dollar staged an impressive rebound in the month, as tariff announcements and trade deals continued to dominate headlines. Meanwhile, developed market government bonds came under pressure in July. In the US, decent economic data, persistent inflation (the US Federal Reserve's preferred core PCE release for June came in at +0.3% month-on-month), and a hawkish tone from the Fed, put pressure on yields. The FOMC's end-of-month rate announcement saw the Fed holding rates steady, in line with market expectations. However, two governors voted for a rate cut marking the first "dual dissent" in over 30 years. Fed Chair Jerome Powell's stance on interest rates faced renewed scrutiny amid speculation that the president might dismiss him. Other major central banks, including the Bank of Japan and the European Central Bank, also kept rates unchanged, as widely anticipated. US consumer price inflation rose 2.7% year-on-year in June versus 2.4% y/y in May, with some market commentators saying this could be the start of tariff-induced price increases. In the UK, the FTSE 100 hit a record high in July and is up over 20% this year (in US\$). UK CPI rose to 4.1% y/y in June, up slightly from 4.0% in May. Turning to the Eurozone, the US-EU trade agreement reached late in July introduced a 15% tariff cap on EU goods, removing fears of steeper tariff escalation and triggering a rebound across European equity markets.

Chinese equities rallied in July, fuelled by a rebound in tech and EV names, better-than-expected macro data, and renewed investor confidence. In Japan, the US-Japan trade deal lifted sentiment. Tariffs on Japanese auto imports were reduced from 25% to 15%, accompanied by \$550 billion in Japanese investment into the US. Looking at global equity market returns (in US\$), emerging markets outperformed developed markets, with the MSCI Emerging Markets Index returning 1.9% and the MSCI World Index delivering 1.3%. Among developed markets, the S&P 500 returned 2.2%, while the Dow Jones Industrial Average delivered 0.2% and the technology-heavy Nasdaq Composite posted 3.7% (in US\$). The UK's FTSE 100 returned 0.7%, while Japan's Nikkei 225 delivered -2.6% (in US\$). The rand weakened 1.8% against the US dollar, but strengthened 0.8% against the euro and 1.7% against the pound sterling.

In July, the theme of M&A provided a boost for our top contributors AES Corp and CSX. AES rose 25% after Bloomberg reported that the US utility had received takeover interest and was exploring options including a potential sale. US railroad operator CSX was another notable winner as industry rivals Union Pacific Railway and Norfolk Southern confirmed they are in discussions for a potential merger. Sempra and Eversource Energy outperformed in a strong month for US utilities, while Gibson Energy added value in energy infrastructure. Alexandria Real Estate and Crown Castle led the gains among our holdings structured as REITs. Among the detractors, Crown Castle's peer American Tower experienced different fortunes as the market took exception to its guidance. The owner and operator of communication towers reported continued demand in the second quarter but lowered its expectation for US organic growth. Unite Group's results were also met with scepticism. The company reported higher revenues driven by strong demand for student accommodation in the UK, but this was offset by higher development costs. The company raised its interim dividend by 5% and reiterated its guidance for the year. Unite is a relatively small holding for us which we continue to monitor. Rand weakness against the US dollar boosted performance in July.

Glossary

12-month yield	A measure of the Fund's income distributions as a percentage of the Fund's net asset value (NAV). This is calculated by summing the income distributions over a rolling 12-month period, then dividing by the sum of the NAV at the end of the period and any capital gains distributed over the same period.
Annualised performance	The average amount of money (total return) earned by an investment each year over a given time period. For periods longer than one year, total returns are expressed as compounded average returns on a yearly basis.
Cumulative performance graph	This illustrates how an initial investment of R100 or N\$100 (for example) placed into the Fund would change over time, taking ongoing fees into account, with all distributions reinvested.
Income distribution	The dividend income and/or interest income that is generated by the underlying Fund investments and that is periodically declared and distributed to investors in the Fund after all annual service fees.
Maximum drawdown	The largest drop in the Fund's cumulative total return from peak to trough over any period.
Monthly volatility (annualised)	Also known as standard deviation. This measures the amount of variation or difference in the monthly returns on an investment. The larger the annualised monthly volatility, the more the monthly returns are likely to vary from the average monthly return (i.e. the more volatile the investment).
Total Expense Ratio (TER)	This shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated for the year to the end of the most recent completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
Transaction Costs (TC)	The percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.
Total Investment Charges (TIC)	The percentage of the value of the Fund incurred as costs, relating to the investment of the Fund. As fund returns are reported after deducting all fees and expenses, these costs (the TER, TC & TIC) should not be deducted from the fund returns.
Unit Classes	M&G's funds are offered in different unit classes to allow different types of investors (individuals and institutions) to invest in the same fund. Different investment minimums and fees apply to different unit classes. A Class: for individuals only. B & D Class: retirement funds and other large institutional investors only. X Class: the special fee class that was made available to investors that were invested in the Dividend Income Feeder Fund. T Class: for investors in tax-free unit trusts. F Class: for Discretionary Fund Managers.

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISCA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee/Custodian details are: Standard Bank of South Africa limited – Trustees Services & Investor Services, 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium-to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The fund may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks. The volatility of the fund may be higher and the liquidity of the underlying securities may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities and to repatriate investment income, capital or the proceeds of sales of securities may be adversely affected for multiple reasons including market conditions, macro-economic and political circumstances. Further, the return on the security may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax jurisdictions. The availability of market information and information on any underlying sub-funds may be delayed. The Manager may, at its discretion, close your chosen unit trust fund to new investors and additional investments by existing investors to make sure that it is managed in accordance with its mandate. It may also stop your existing debit order investment. The Manager makes no guarantees as to the capital invested in the fund or the returns of the fund. Excessive withdrawals from the fund may place the fund under liquidity pressure and, in certain circumstances, a process of ring fencing withdrawal instructions may be followed. Fund prices are published daily on the M&G website. These are also available upon request. The performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Purchase and repurchase requests must be received by the Manager by 13h30 (11h30 for the Money Market Fund) SA time each business day. All online purchase and repurchase transactions must be received by the Manager by 10h30 (for all Funds) SA time each business day.

⁴ If the income earned in the form of dividends and interest exceeds the total expenses, the Fund will make a distribution (cpu = cents per unit).
